

**BISHOP SCOTT BOYS' SCHOOL**  
**GRADE XI / ECONOMICS/ SYLLABUS (2024-25)**

| MONTH  | NAME OF THE UNIT                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| APRIL  | <p>PART – A : STATISTICS FOR ECONOMICS</p> <p><b>UNIT 1 : INTRODUCTION</b></p> <p>What is Economics? Meaning, scope, functions and importance of statistics in Economics</p> <p>PART-B: INTRODUCTORY MICROECONOMICS</p> <p><b>UNIT 4 : INTRODUCTION</b></p> <p>Meaning of microeconomics and macroeconomics; positive and normative economics<br/>           What is an economy? Central problems of an economy: what, how and for whom to produce; concepts of Production Possibility Frontier and Opportunity Cost</p> |
| MAY    | <p>PART – A : STATISTICS FOR ECONOMICS</p> <p><b>UNIT-2: COLLECTION, ORGANISATION AND PRESENTATION OF DATA</b></p> <p><b>COLLECTION OF DATA:</b> - sources of data - primary and secondary; how basic data is collected with concepts of Sampling; methods of collecting data; some important sources of secondary data: Census of India and National Sample Survey Organisation</p> <p><b>ORGANISATION OF DATA:</b> Meaning and types of variables; Frequency Distribution</p>                                          |
| JUNE   | <p>PART – A : STATISTICS FOR ECONOMICS</p> <p><b>UNIT-2: COLLECTION, ORGANISATION AND PRESENTATION OF DATA</b></p> <p><b>PRESENTATION OF DATA:</b> Tabular Presentation and Diagrammatic Presentation of Data :</p> <p>(i) Geometric forms (bar diagrams and pie diagrams)</p> <p>(ii) Frequency diagrams (histogram, polygon and ogive) and</p> <p>(iii) Arithmetic line graphs (time series graph)</p>                                                                                                                 |
| JULY   | <p>PART-B : INTRODUCTORY MICROECONOMICS</p> <p><b>UNIT-5 CONSUMER'S EQUILIBRIUM AND DEMAND</b></p> <p>Consumer's equilibrium - meaning of utility, Marginal Utility, Law of Diminishing Marginal Utility, conditions of consumer's equilibrium using marginal utility analysis</p> <p>Indifference curve analysis of consumer's equilibrium-the consumer's budget (budget set and budget line), preferences of the consumer (indifference curve, indifference map) and conditions of consumer's equilibrium</p>          |
| AUGUST | <p>PART-B : INTRODUCTORY MICROECONOMICS</p> <p><b>UNIT-5 CONSUMER'S EQUILIBRIUM AND DEMAND</b></p> <p>Demand, market demand, determinants of demand, demand schedule, demand curve and its slope, movement along and shifts in the demand curve; price elasticity of demand – factors affecting price elasticity of demand; measurement of price elasticity of demand – percentage-change method and total expenditure method</p>                                                                                        |

|                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| SEPTEMBER          | REVISION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| OCTOBER            | <p>PART – A : STATISTICS FOR ECONOMICS</p> <p><b>UNIT-3 STATISTICAL TOOLS AND INTERPRETATION</b></p> <p>For all the numerical problems and solutions, the appropriate economic interpretations may be attempted. This means, the students need to solve the problems and provide interpretation for the results derived.</p> <p><b>Measures of Central Tendency-</b> Arithmetic mean, Median and Mode</p> <p><b>Correlation</b> – meaning and properties, scatter diagram; Measures of correlation - Karl Pearson's method (two variables ungrouped data) Spearman's rank correlation ( Non-Repeated Ranks and Repeated ranks)</p> <p><b>Introduction to Index Numbers</b> - meaning, types - Wholesale Price Index, Consumer Price Index and index of industrial production, uses of index numbers; Inflation and Index numbers. Simple Aggregative Method</p> <p>PART-B: INTRODUCTORY MICROECONOMICS</p> <p><b>UNIT-6 PRODUCER BEHAVIOUR AND SUPPLY</b></p> <p>Meaning of Production Function – Short-Run and Long-Run<br/>Total Product, Average Product and Marginal Product<br/>Returns to a Factor<br/>Cost: Short run costs - Total Cost, Total Fixed Cost, Total Variable Cost; Average Cost; Average Fixed Cost, Average Variable Cost and Marginal Cost-meaning and their relationships</p> |
| NOVEMBER           | <p>PART-B: INTRODUCTORY MICROECONOMICS</p> <p><b>UNIT-6 PRODUCER BEHAVIOUR AND SUPPLY</b></p> <p>Revenue – Total Revenue, Average Revenue and Marginal Revenue - meaning and their relationship<br/>Producer's equilibrium-meaning and its conditions in terms of Marginal Revenue- Marginal Cost<br/>Supply, market supply, determinants of supply, supply schedule, supply curve and its slope, movements along and shifts in supply curve, price elasticity of supply; measurement of price elasticity of supply - percentage-change method.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| DECEMBER           | <p>PART-B: INTRODUCTORY MICROECONOMICS</p> <p><b>UNIT-7 PERFECT COMPETITION – PRICE DETERMINATION AND SIMPLE APPLICATIONS</b></p> <p>Perfect competition - Features; Determination of market equilibrium and effects of shifts in demand and supply.( Short Run Only)</p> <p>Simple Applications of Demand and Supply: Price ceiling, Price floor</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| JANUARY            | REVISION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| APRIL     | <b>LESSON 2 : UNITS AND MEASUREMENTS</b><br>Need for measurement: Units of measurement; systems of units; SI units, fundamental and derived units. significant figures. Dimensions of physical quantities, dimensional analysis and its applications                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| MAY       | <b>LESSON 3 : MOTION IN A STRAIGHT LINE</b><br>Frame of reference, Motion in a straight line, Elementary concepts of differentiation and integration for describing motion                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| JUNE      | <b>LESSON 3 : MOTION IN A STRAIGHT LINE</b><br>Uniform and non- uniform motion, and instantaneous velocity, uniformly accelerated motion, velocity -time and position-time graphs. Relations for uniformly accelerated motion (graphical treatment)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| JULY      | <b>LESSON 4 : MOTION IN A PLANE</b><br>Scalar and vector quantities; position and displacement vectors, general vectors and their notations; equality of vectors, multiplication of vectors by a real number; addition and subtraction of vectors, Unit vector; resolution of a vector in a plane, rectangular components, Scalar and Vector product of vectors.<br>Motion in a plane, cases of uniform velocity and uniform acceleration projectile motion, uniform circular motion<br><b>LESSON 5 : LAWS OF MOTION</b><br>Intuitive concept of force, Inertia, Newton's first law of motion; momentum and Newton's second law of motion; impulse; Newton's third law of motion. Law of conservation of linear momentum and its applications<br>Equilibrium of concurrent forces, Static and kinetic friction, laws of friction, rolling friction, lubrication<br>Dynamics of uniform circular motion: Centripetal force, examples of circular motion (vehicle on a level circular road, vehicle on a banked road) |
| AUGUST    | <b>LESSON 6 : WORK, ENERGY AND POWER</b><br>Work done by a constant force and a variable force; kinetic energy, work energy theorem, power. Notion of potential energy, potential energy of a spring, conservative forces: non-conservative forces, motion in a vertical circle; elastic and inelastic collisions in one and two dimensions<br><b>LESSON 9 : MECHANICAL PROPERTIES OF SOLIDS</b><br>Elasticity, Stress-strain relationship, Hooke's law, Young's modulus, bulk modulus, shear modulus of rigidity (qualitative idea only), Poisson's ratio; elastic energy                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| SEPTEMBER | <b>LESSON 7 : SYSTEM OF PARTICLES AND ROTATIONAL MOTION</b><br>Centre of mass of a two-particle system, momentum conservation and Centre of mass motion. Centre of mass of a rigid body; centre of mass of a uniform rod<br>Moment of a force, torque, angular momentum, law of conservation of angular momentum and its applications<br>Equilibrium of rigid bodies, rigid body rotation and equations of rotational motion, comparison of linear and rotational motions<br>Moment of inertia, radius of gyration, values of moments of inertia for simple geometrical objects (no derivation)                                                                                                                                                                                                                                                                                                                                                                                                                     |

|                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                    | <p><b>LESSON 8 : GRAVITATION</b><br/>Kepler's laws of planetary motion, universal law of gravitation. Acceleration due to gravity and its variation with altitude and depth. Gravitational potential energy and gravitational potential, escape velocity, orbital velocity of a satellite</p> <p><b>REVISION</b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| OCTOBER            | <p><b>LESSON 10 : MECHANICAL PROPERTIES OF FLUIDS</b><br/>Pressure due to a fluid column; Pascal's law and its applications (hydraulic lift and hydraulic brakes), effect of gravity on fluid pressure</p> <p>Viscosity, Stokes' law, terminal velocity, streamline and turbulent flow, critical velocity, Bernoulli's theorem and its simple applications<br/>Surface energy and surface tension, angle of contact, excess of pressure across a curved surface, application of surface tension ideas to drops, bubbles and capillary rise</p>                                                                                                                                                                                                                                                                                                         |
| NOVEMBER           | <p><b>LESSON 11 : THERMAL PROPERTIES OF MATTER</b><br/>Heat, temperature, thermal expansion; thermal expansion of solids, liquids and gases, anomalous expansion of water; specific heat capacity; <math>C_p</math>, <math>C_v</math> -calorimetry; change of state - latent heat capacity<br/>Heat transfer-conduction, convection and radiation, thermal conductivity, qualitative ideas of Blackbody radiation, Wein's displacement Law, Stefan's law</p> <p><b>LESSON 12 : THERMODYNAMICS</b><br/>Thermal equilibrium and definition of temperature, zeroth law of thermodynamics, heat, work and internal energy. First law of thermodynamics, Second law of thermodynamics: gaseous state of matter, change of condition of gaseous state -isothermal, adiabatic, reversible, irreversible, and cyclic processes</p>                             |
| DECEMBER           | <p><b>LESSON 13 : KINETIC THEORY</b><br/>Equation of state of a perfect gas, work done in compressing a gas<br/>Kinetic theory of gases - assumptions, concept of pressure. Kinetic interpretation of temperature; rms speed of gas molecules; degrees of freedom, law of equi-partition of energy (statement only) and application to specific heat capacities of gases; concept of mean free path, Avogadro's number</p> <p><b>LESSON 14 : OSCILLATIONS</b><br/>Periodic motion - time period, frequency, displacement as a function of time, periodic functions and their application<br/>Simple harmonic motion (S.H.M) and its equations of motion; phase; oscillations of a loaded spring- restoring force and force constant; energy in S.H.M. Kinetic and potential energies; simple pendulum derivation of expression for its time period</p> |
| JANUARY            | <p><b>LESSON 15 : WAVES</b><br/>Wave motion: Transverse and longitudinal waves, speed of travelling wave, displacement relation for a progressive wave, principle of superposition of waves, reflection of waves, standing waves in strings and organ pipes, fundamental mode and harmonics, Beats</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| FEBRUARY-<br>MARCH | REVISION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

**BISHOP SCOTT BOYS' SCHOOL**  
**GRADE XI / POLITICAL SCIENCE / SYLLABUS (2024-25)**

| MONTH     | CHAPTER                                                                                                     |
|-----------|-------------------------------------------------------------------------------------------------------------|
| APRIL     | Lesson – 1 : Constitution: Why and How? (Part-A)<br>Lesson – 1: Political Theory: An Introduction (Part-B)  |
| MAY       | Lesson – 2 : Rights in the Indian Constitution (Part-A)<br>Lesson – 2 : Freedom (Part-B)                    |
| JUNE      | Lesson – 3 : Election and Representation (Part-A)<br>Lesson – 3 : Equality (Part-B)                         |
| JULY      | Lesson – 4 : Executive (Part-A)<br>Lesson – 5 : Legislature (Part-A)<br>Lesson – 4: Social Justice (Part-B) |
| AUGUST    | Lesson – 6 : Judiciary (Part-A)<br>Lesson – 5: Rights (Part-B)                                              |
| SEPTEMBER | REVISION                                                                                                    |
| OCTOBER   | Lesson – 7 : Federalism (Part-A)<br>Lesson – 6: Citizenship (Part-B)                                        |
| NOVEMBER  | Lesson – 8 : Local Governments (Part-A)<br>Lesson – 7 : Nationalism (Part-B)                                |
| DECEMBER  | Lesson – 9 : Constitution as a Living Document (Part-A)<br>Lesson – 8 : Secularism (Part-B)                 |
| JANUARY   | Lesson – 10 : The Philosophy of the Constitution (Part-A)                                                   |
| FEBRUARY  | REVISION                                                                                                    |
| MARCH     | REVISION                                                                                                    |

THE MAP WORK RELATED TO VARIOUS THEMES IS INCLUDED.
